Request for Proposal

Warehouse Management & Procurement System — Project Horizon

RFP Reference: MML-PH-RFP-01
Issued by: Nupur Sharma, Business Analyst, on behalf of the Project Horizon Steering Committee
Response due: 20 business days from issue date
Version: 1.0

1. Introduction & Background

Meridian Manufacturing & Logistics Pvt. Ltd. ('Meridian') operates two manufacturing plants and three regional distribution warehouses on LogiTrack Classic, an on-premise warehouse management and procurement system implemented in 2011 that is no longer supported by its vendor. A current-state assessment conducted across Operations, Finance, Warehouse, Procurement, and IT identified ten distinct pain points spanning inventory visibility, audit and compliance, floor-level data capture, procurement workflow, and infrastructure resilience. This RFP invites qualified vendors to propose a replacement platform that addresses these findings.

This RFP should be read alongside the attached Current-State Assessment, which provides full context on each pain point (PP-01 through PP-10) referenced in the requirements below.

2. Project Objectives

- Replace LogiTrack Classic with a supported, scalable platform covering warehouse management and procurement.
- Eliminate manual, paper-based floor operations through native barcode/handheld support.
- Establish a defensible audit trail for all inventory and cost adjustments.
- Reduce Finance's manual reconciliation effort through native or API-based integration with Tally.
- Formalize the purchase requisition-to-PO workflow with configurable approval thresholds.

3. Scope of Work

The selected vendor will be responsible for solution configuration, data migration from LogiTrack Classic, integration with Tally, end-user training across three warehouse sites and two plants (approx. 120 users), and post-go-live support. Meridian's Business Analyst and IT teams will support requirements validation, UAT coordination, and change management; the vendor will not be responsible for organizational change management beyond providing training materials and a train-the-trainer session.

4. Functional & Non-Functional Requirements

Requirements are grouped by evaluation category (Section 6). 'M' denotes Mandatory — a proposal that cannot meet an M requirement, or cannot describe a credible workaround, receives the lowest score (1) on that category and is flagged as a mandatory-requirement red flag in the evaluation. 'D' denotes Desirable — scored but not disqualifying. The 'Pain Point' column traces each requirement back to a specific finding in the Current-State Assessment.

1. Inventory & Warehouse Operations (Evaluation weight: 25%)

ID	Requirement	M/D	Pain Point
FR-01	Real-time, consolidated stock visibility across all plants and warehouses from a single screen	M	PP-01
FR-02	Native barcode / handheld scanner support for put-away, picking, and cycle counts	M	PP-04
FR-03	Configurable low-stock and stock-out alerts by SKU and location	M	PP-01
FR-04	System must sustain current peak dispatch volumes (min. 3x current daily transaction load) without performance degradation	M	PP-05
FR-05	Support for cycle counting and physical inventory reconciliation workflows	D	PP-04

2. Procurement & Vendor Management (Evaluation weight: 15%)

ID	Requirement	M/D	Pain Point
FR-06	Configurable purchase requisition-to-PO approval workflow with plant- and category-specific thresholds	M	PP-06
FR-07	Three-way matching of PO, GRN, and vendor invoice with exception handling	M	PP-07
FR-08	Vendor performance tracking (on-time delivery, price history, quality flags)	D	PP-06

3. Finance Integration & Reporting (Evaluation weight: 15%)

ID	Requirement	M/D	Pain Point
FR-09	Native or API-based integration with Tally for automated ledger sync	M	PP-03
FR-10	Landed-cost calculation for imported raw materials (freight, duty, insurance apportionment)	M	PP-10
FR-11	Configurable dashboards for fill rate, dead stock, and inventory valuation, exportable to Excel/PDF	M	PP-01
FR-12	Full, immutable audit trail on every inventory and cost adjustment, with user, timestamp, and reason code	M	PP-02

4. Security & Access Control (Evaluation weight: 15%)

ID	Requirement	M/D	Pain Point
NFR-01	Role-based access control configurable down to warehouse/plant and transaction-type level	M	PP-09
NFR-02	Single sign-on (SSO) support (SAML 2.0 or OAuth 2.0)	M	PP-09

ID	Requirement	M/D	Pain Point
NFR-03	Data encrypted at rest and in transit; vendor to name compliance certifications held (ISO 27001 or equivalent)	M	—
NFR-04	Data residency: vendor to confirm hosting region and confirm data stays within India or a jurisdiction Meridian's IT/Legal can accept	M	—

5. Technical Architecture & Integration (Evaluation weight: 15%)

ID	Requirement	M/D	Pain Point
NFR-05	Documented, versioned REST API for integration with Tally today and a planned ERP in future phases	M	PP-08
NFR-06	99.5% or better uptime SLA with defined disaster-recovery / failover architecture (no single point of failure)	M	PP-08
NFR-07	Cloud or hybrid deployment preferred; on-prem-only proposals must include a documented HA/DR plan	D	PP-08
NFR-08	Mobile-responsive or native handheld app for warehouse-floor use, working on standard Android scanner hardware	M	PP-04

6. Implementation, Support & Vendor Viability (Evaluation weight: 15%)

ID	Requirement	M/D	Pain Point
NFR-09	Vendor to provide implementation timeline, methodology, and a named delivery team with relevant manufacturing/logistics references	M	—
NFR-10	Minimum 2 verifiable customer references in manufacturing or logistics, contactable during evaluation	M	—
NFR-11	Post-go-live support SLA (response/resolution times by severity) and training plan for ~120 users across 3 sites	M	—
NFR-12	Financial stability of vendor (years in operation, existing customer base size) sufficient to commit to a multi-year contract	D	—

5. Vendor Response Format

Vendors are asked to structure their proposal as follows so responses can be evaluated consistently against the scorecard in Section 6:

- Section A — Company overview, financial standing, and relevant manufacturing/logistics references (min. 2)
- Section B — Point-by-point response to every requirement in Section 4, marked Fully Met / Partially Met / Not Met, with a one-paragraph explanation for each Partially Met or Not Met item

- Section C — Implementation plan: timeline, methodology, named delivery team, and data-migration approach
- Section D — Commercial proposal: implementation/one-time cost and recurring annual cost, itemized by module
- Section E — Support & SLA commitments post go-live

6. Evaluation Criteria & Weighting

Proposals will be scored against the weighted categories below using the evaluation scorecard maintained by the Business Analyst. Commercial proposals (Section 5, Section D) feed the cost-benefit analysis maintained separately and are not part of the weighted functional score, to keep price from crowding out fit during shortlisting; price is reviewed as a distinct gate before final recommendation.

Evaluation Category	Weight
Inventory & Warehouse Operations	25%
Procurement & Vendor Management	15%
Finance Integration & Reporting	15%
Security & Access Control	15%
Technical Architecture & Integration	15%
Implementation, Support & Vendor Viability	15%
Total	100%

7. Indicative Timeline

- RFP issued: Day 0
- Vendor questions due: Day 5
- Proposals due: Day 20
- Shortlist & vendor demos: Day 25–35
- Reference checks & final scoring: Day 36–42
- Vendor selection & contract negotiation: Day 43–55

8. Submission Instructions

Proposals should be submitted electronically to the Business Analyst named on the cover page by the response deadline above. Late submissions will not be considered. Questions during the response period should be submitted in writing; answers will be circulated to all invited vendors to keep the process fair.
